

## Progress at COP26 Must Now Lead to Accelerated, Equitable Implementation of Climate Solutions

**November 13, 2021**—"At the conclusion of the U.N. climate talks in Glasgow, world leaders reaffirmed their individual and collective commitments that will allow countries to take the next steps to put the Paris Agreement into action," said Daniel Bresette, executive director of the Environmental and Energy Study Institute (EESI). "Now that the Paris Agreement rulebook is finalized, these plans to reduce greenhouse gas emissions must be implemented with the urgency that comes with knowing that time is running out to avoid the worst outcomes of climate change."

"Glasgow yielded an agreement on greater transparency to help countries keep track of and report on their progress, as well as more financial support for adaptation for developing countries than at any previous COP— although still at levels far below what we require. The text also calls for an end to fossil fuel subsidies that make it harder to meet our climate goals. I also appreciate that climate adaptation, international climate finance, youth empowerment, and gender equity received more attention and discussion in the climate talks than before, which I hope carries forward to next year when Egypt hosts the 27th Conference of Parties (COP27) of the United Nations Framework Convention on Climate Change.

"EESI was primarily engaged in COP26 to help inform U.S. policymakers, and it was encouraging to see the United States once again embrace a leadership role in climate negotiations. U.S. leadership has been and will continue to be absolutely critical in efforts to address climate change. In particular, the Congressional delegation to COP26 was the largest yet and included Speaker Nancy Pelosi and senators and representatives from both sides of the aisle. Congress has an essential role in developing new policies and funding new investments to reduce greenhouse gas emissions at home and abroad. Congressional engagement, in addition to substantive U.S. participation in negotiations, sends a positive message to the world that policymakers are serious about climate change and able to work together when it matters most of all."

**The Environmental and Energy Study Institute** (<u>www.eesi.org</u>) is an independent, non-profit organization advancing innovative policy solutions to set us on a cleaner, more secure and sustainable energy path. EESI educates policymakers, builds coalitions and develops policy in support of energy efficiency, renewable energy, sustainable biomass, sustainable buildings, and sustainable transportation. EESI was founded by a bipartisan Congressional caucus in 1984, and its strong relationship with Congress helps EESI serve as a trusted source of credible, non-partisan information on energy and environmental issues. EESI receives no congressional funding and is supported through contributions and grants.
